Project Video should cover Following Things

1) Focus on Introduction Presentation Slide and introduce your project
2) Focus on Front Panel and Explain the different VI used in Front Panel
3) Focus on Block Diagram and Explain the different VI used in Block Diagram
4) Focus on Hardware and Explain the components used in Hardware
5) Demonstrate the real time results by recording Front Panel and Block Diagram Together and focusing camera on the output (hardware)
6) Focus on Thank You Presentation Slide

CHOOSING YOUR IDEAL SHOOTING LOCATION

- Find a location that is well-lit with natural sunlight or plenty of indoor lighting
- Choose a quiet location with little background noise (street sounds, music, other people)
- Avoid spaces with lots of echo
- Turn off air conditioners and heaters to avoid fan noise
- Provide a seat for yourself that is stationary and quiet (no chairs with wheels/swivels, overstuffed cushions, or squeaky screws)
- Background should be white colour

SETTING UP YOUR PHONE / CAMERA

- Set your laptop, phone, or camera on a tripod or steady surface (please do not hold your camera while shooting to avoid shaky footage)
- Shoot horizontally (use landscape mode and avoid portrait mode)
- Position camera at project level (if you can, avoid angles where the camera lens is looking up or down on project)
- Choose a non-distracting background (avoid windows, showing other people, posters/signs that can be read etc)

LIGHTING

- Shoot in daylight if possible

- Position the project so windows or your main light sources are facing the project, not behind project.
- Avoid overhead lights
- When shooting indoors, consider using a ring light that clips to your computer/phone to help light your project

DELIVERING PRESENTATIONS

- Consider using a teleprompter app in order to minimize looking up and down from your screen. A few to consider include: Cue Prompter, PromptDog, and Promptsmart.

A FEW OTHER HELPFUL HINTS

- If you can, ask a project member to assist you while you record
- Do a short recording test to make sure you can see and hear yourself clearly
- Have water handy for clearing your throat
- A bite from an apple can help take care of a dry mouth!

TECH SPECS

- Check your video camera settings to make sure you are shooting one of three formats: 1080p at 30fps, 1080p at 60fps, or 1080p at 24fps. 720p and 4k is fine too.
    - On Android phones, the settings are usually in the main camera app behind the gear settings wheel
    - On iPhones, the camera settings are in the main settings icon in the photos and camera section
- If you are unsure, no worries, your camera's default setting should generally be ok.
